**Please consider the following definition before replying:** An information system is the set of analytical applications geared toward preparing corporate or project system's data for business analyses and support (risk informed) decision making.

**General questions:**

What size is your organization?

Do you have branches, divisions, affiliates?

What are the key management roles?

How do you get a global 360-view on your organization?

Do you have an information system in your organization? **YES/NO?**

**If NO information system available:**

1. Why is it so?
2. What feature would make you decide to invest in a new information systems?
3. Who would need to be convinced to get an information system?

**If YES, an information system is available:**

1. What is the role that upward/downward risks have in the global 360-view?
2. What is the importance of data treatment and information management in formulating the global 360-view in your organization?

**Information System Anonymous Q/A session**
